Jesus Cesar Pastorini Junior

Full stack Developer

I have a degree in Systems Analysis and Development and a Technical degree in IT, in addition to several adjacent courses in programming. Life directed me towards the IT support field, where I worked for five years. For several years, I have been preparing to make this transition to the programming field. You can follow my progress on my GitHub (https://github.com/JesusPastorini), where I have over forty projects, some with deployments. Or LinkedIn (https://www.linkedin.com/in/jesus-pastorini-75371286/).

I am passionate about solving bugs in code, there is nothing better than finding that error that was frying your brain or your team's brain. It's an unforgettable feeling of victory.

I have excellent communication skills and solid learning in the field. I am capable of managing multiple tasks, ensuring operational efficiency.

Experience
